Hi Roger,

The radiological data investigations which include review of the past soil samples and building scans conducted by Tetra Tech continues (since 2016). The review of the data will include confirmation sampling. This information was presented in a past Navy public meeting. So at this point, there is no additional work as a result of the press conference. The Navy and regulatory agencies are taking the accusations seriously and take them under consideration as the investigation continues. It's important to note that the data investigations are completely separate from any federal enforcement investigations that may be occurring. There will be a public meeting to give the community an update at a future SF CAC meeting (Sept. or Oct.). In the meantime the Navy recently sent out their annual update which includes an update on the rad data investigation on the last page (attached).

Nina

Subject: Updates??

Hi Nina and Lily,

In light of the GA press conference last month and additional disclosures concerning whistleblowers - are there any steps or new commitments in behalf of the dept?

Thanks
